

Ukrainian Rescue Drivers and Shiftwave

After Russia's full-scale invasion of Ukraine in February 2022, volunteer drivers carried civilians out of areas under attack, often on very long runs with little rest.

What Shiftwave Did

Within 6 weeks of the full-scale invasion, the Shiftwave team went to Ukraine and donated Shiftwaves to evacuation rescue drivers, including a unit delivered to Kidsave for its rescue drivers. Over six trips, the team has demonstrated and donated the technology at more than 30 sites. Mike North, Ph.D., Shiftwave Co-Founder, Inventor and CEO, filmed Pavlo after a session in April 2022. (Shiftwave, Ukraine Support report)

What the Drivers Reported

Ukrainian evacuation drivers (n=23): anxiety down 80% on average and completely eliminated in 68%; pain down 66% and fully eliminated in 43%. (Shiftwave internal data, Ukraine rescue drivers)

Other groups in the same Shiftwave data: Ukrainian aid workers (n=20): stress down 23%, pain down 80%, pain fully eliminated in 60%. US frontline hospital staff during COVID (n=24): stress down 82%, pain down 37%, pain fully eliminated in 54%.

In the Drivers' Own Words

Pavlo, volunteer evacuation bus driver

> "Stress, yes. It's gone. The stress is leaving."

> "Very good, and my head is freeing up. It was clenched, it was tight."

> "It will be a great help for our guys, who are saving people, who are saving children."

Rescue driver, Kidsave, near Vinnytsia

> "This chair, which helps us a lot after long trips."

> "Get some relaxation after a tense trip that lasts 20 hours."

> "You know, sometimes you need to sit for a bit and let go of all this stress, and this chair helps you deal with this stress very well."

Why It Matters for US Truckers

Long hours, irregular sleep, and stress that builds up behind the wheel are part of every professional driver's job. These drivers faced them at the extreme, on runs of up to 20 hours. What they described is a reset that fit where they were, between runs.
